Twelve from one

12-in-1 USB-C docking station from Hama

USB-C has simplified a lot of things in the mobile data world. There is now just one connection socket for many devices. However, the problem of too few connections – as in the case of notebooks, for instance – remains.

The 12-in-1 USB-C docking station from Hama changes this. In addition to four USB-A ports, it has a USB-C connection, a LAN (RJ45) connection and a 3.5-mm jack, plus an integrated card reader for SD and microSD cards. A further USB-C socket can be used to connect a PD power supply unit. However, there is one detail that differentiates the docking station from previous models: Thanks to Multi-Stream Transport, you can run two monitors displaying different contents. To do this, you connect one monitor via a DisplayPort connection and one via a HDMI connection. No bothersome unplugging and replugging.

This allows you to process large lists or fully utilise two applications simultaneously. Suitable sound can be played through speakers or headphones connected via the 3.5-mm jack – thanks to the digital audio converter, this is in crystal-

clear high-performance stereo quality.

A stable holder with a rubber bottom for tablets and smartphones allows you to work comfortably, and rounds off the features of the 12-in-1 USB-C docking station.
