12-in-1 USB-C docking station with notebook stand

Working from a home office is practical and, from a technical point of view, just as good as working in a traditional office. Well almost. At home, users often don't have enough ports for their various devices. The 12-in-1 USB-C docking station from Hama, which even has an integrated notebook holder, offers a solution.

It can be used, for example, to connect two additional monitors to a notebook and display different contents on the three screens. This is made possible through Multi-Stream Transport technology.

The additional sockets are: four USB-A, one USB-C power, one VGA, two HDMI, one LAN, one SD card reader, one microSD card reader, and a 3.5-mm audio socket.

The USB-C socket supports USB Power Delivery (USB PD), and thus enables charging with a USB-C power supply unit.

When it comes to data transfer, the docking station can boast Gigabit Ethernet transfer rates of up to 1 Gbit/s and SuperSpeed transfer rates of up to 5 Gbit/s. It also processes data from SD and microSD cards up to 2 TB in size.

With its robust aluminium housing, and from a purely aesthetic point of view, the docking station is almost too good to be just for the home office. A striking feature is the wide spacing between sockets, making it easy to connect wide plugs. Optimised kink protection, achieved through use of flexible materials,

prevents cable damage and rounds off the high-quality look of the 12-in-1 USB-C docking station with notebook stand.

Item No. 200106 USB-C Docking Station with Notebook Stand,
12 Ports
