Installation instructions and tips for attaching the screen protector

1. Preparing the screen

Ensure that the screen is clean and free from fingerprints, dust, and other particles. Use a clean, soft cloth to wipe off any dirt or smudges. If necessary, use a screen cleaning kit to remove stubborn smudges or fingerprints.

2. Positioning the screen protector

Choose a suitable location for the screen protector. Make sure that the screen is placed in a stable position and that the screen protector will not be obstructed by other objects. Ensure that the screen protector is not exposed to direct sunlight or strong lighting, as it can cause glare or reflection.

3. Attaching the screen protector

Attach the screen protector using the included tools. Place the screen protector on the screen and press down firmly to ensure a secure and stable attachment. Use the included tools to adjust the position and ensure that the screen protector is level and parallel to the screen.

4. Mode of use

Use the screen protector as a protective layer for the screen. It is recommended to use the screen protector in conjunction with other protective measures, such as a protective film or a protective case. Avoid using the screen protector in areas with high humidity or temperature, as it may cause damage or deterioration.

5. Support and contacts

If you have any questions or concerns, please contact us through our customer support. We are available to assist you with any problems or issues you may encounter while using the screen protector. Please visit our website or contact us through our customer support channel for more information.
