 Operating Instructions

First, check the vehicle for installation options. If necessary, consult the vehicle manufacturer. Mount the bracket according to the pictures. In doing so, make sure that elements do not obstruct the field of vision.

A When using the adhesive bracket, the adhesive surface in the vehicle must be free of dust and grease. Clean the surface using a suitable cleaning agent (specialized dealer). Leave the adhesive pad in a stationary position, without a load, for at least 24 hours! Do not mount the device rack until you have done so.

B Slide the ventilation grill onto the open panel until it locks into place.

C When installing the suction cup bracket, first remove the protection film on the suction base and then attach it on a clean, level surface by pressing the locking button. The small side buttons are unlocked by pulling the suction cup upwards.

D Slide the device rack (2) with the mount onto the latch (1) of the bracket.

E The rack is opened by pressing the side button (3) and then closed by pressing the side jaw (4). Your mobile phone/FDA/MP3 player is then securely attached.
