3DS screen protector

Applying the screen protector to the top screen

Step 1:
Hold one corner of the screen protector. The set contains screen protectors in three different thicknesses: One thin screen protector with the printed side up, one thick screen protector with the printed side down and one medium screen protector for the 3DS screen.

Step 2:
Remove the thin screen protector in a dust-free environment and place the self-adhesive side carefully on the edge of the 3DS screen.

Step 3:
Slide the plastic card slowly forwards with one hand. This removes air bubbles while applying the screen protector.

Step 4:
Now remove the thickest screen protector and apply it as described in step 3, but to the top of the 3DS screen.

Now you can enjoy your game!
