**Charger »SF03«**

This power supply unit is specifically designed for USB sticks, e.g. MP3 players, memory sticks, memory cards etc. that are powered via a USB connector. The device works with most external MP3 players, among others.

Using the power supply unit, USB sticks can also be charged or operated continuously without a PC or laptop.

Before starting up certain devices, ensure that the maximum current output does not exceed 500 mA. The power supply unit can at its own discretion be used with all other USB consumers of up to 500 mA as long as they are assigned in compliance with the worst-case situation.

Please note that devices with an output current greater than 500 mA must not be connected. If you are not sure whether your device needs these requirements, please contact your manufacturer of the USB stick.

The wide range output of 100-420 V AC/50 Hz allows you to use the travel charger all over the world. Depending on the country and region, a travel adapter may also be necessary before requiring an appropriate power connection to the country-specific power socket.

Before using your USB stick with a Power supply unit, please be sure to read the information regarding the power requirements in the operating instructions for the USB stick.

Using your operating instructions explicitly instead of information, proceed as follows: 1. Select the USB stick which is to be charged. 2. Connect the included cable to the USB port of your computer, tablet etc. Then switch the USB switch to ON. Be sure to select the correct power socket for your device.

**Note:** Some USB sticks (e.g. Samsung) switch to PC mode when connected in a Power supply unit. Therefore, you cannot charge your device in this mode. Fast this mode in order to begin charging. If your USB stick is completely charged, you must first charge it using the standard charger provided by the manufacturer or using the USB port on your computer (if necessary, otherwise you will not be able to switch to PC mode).

When charging the batteries for the USB stick, be sure to check the maximum charging current.

Also observe the safety and disposal instructions enclosed.
